action ALERT

Hi George,

Poverty is such a momentous, complex problem that it can be hard to know where to start. Fortunately, there is some rhyme and reason to combating world-wide poverty.

According to World Bank estimates, growth in the agricultural sector is twice as effective at reducing poverty as growth in other sectors.

[Urge your Senators to sign onto the Global Food Security Act »](#)

The Global Food Security Act will support small farmers in Africa with things like seeds, fertilizer, successful farming techniques and basic infrastructure. These commonsense investments can provide families with sustainable incomes and give local communities self-sustaining futures.

Providing financial aid is important, but it's even better to bring about conditions that make aid no longer necessary.

[Take a moment to tell your Senators that you support the Global Food Security Act and hope they will do the same »](#)

Thank you, Andrew Care2 and ThePetitionSite

Help African Farmers Overcome Poverty and Hunger

Target: U.S. Senate
Sponsored by: ONE

The World Bank estimates that growth in the agricultural sector is *twice as effective* at reducing poverty as growth in other sectors. That's why the Global Food Security Act is such an important piece of legislation for helping Africa's poor farmers fight hunger, combat poverty and achieve a self-sustaining future.

The plan outlined in the Global Food Security Act will help farmers in Africa get the tools they need to feed themselves, feed their communities and beat back poverty.

From across the country, people who care about poverty and hunger are calling on their senators to sign onto the Lugar-Casey letter in support of the Global Food Security Act. **Join them by asking your senators to sign on in support of this important legislation**

My letter text:

As the **2007 and 2009 European Union Humanitarian Grantee (EUHG)** the "sustainable economic development" poverty reduction Project we have agreed to implement with the 2.3 M Euros **2007 EUHG** gift to pay the fee and award is a **Sustainable Agro-Forestry Garden** based holistic one including a **biological control of malaria mosquitoes subcomponent**. Our exhaustive **General Human Systems Theory** analysis of world poverty identifies **sustainable agriculture/horticulture** and the other side of the coin the **Vegan/Herbivore Diet** as the keystones of addressing global poverty and the Green House Global Warming threat detailed at <http://www.theuniversityofgod.org/Page9.html>. This policy principle is acknowledged by the **United Nations Millennium Project** that is targeting world poverty.

Yours in service,

George W. Singleton, III BA., HD., DD.
