### Poem Foot Notes

\* The African Origin of Western Civilization by the Senegalese author from the University of Senegal Professor of nuclear physics Chek Anka Diop, PhD. presents for the first time the anatomical characteristics of the aboriginal human female earth goddesses called "Venus" including pictures of her "steatophygic" ass that curves up allowing her "sacred flower" to be viewed, licked, tongued, sucked or coitally entered from the rear **without** her bending over as much as non-steatophygic women.

Esoterically, genetically the "sacred flowers" of later women began to be pointed down and in because of the destruction of the Gardens of Eden where beautiful bodies and nudity was sacred to the "land of Nod" dominated by lustful behavior as now meat and specifically "mammal cannibalism" diets and alcohol and other depressant drugs cause animal lustful rape responses to the sight and access to a nude or partially nude beautiful woman's body.

\*\* Arnold Ehret's Mucusless Diet Healing System discloses the amenses condition of women fully discussed at [www.hopelausea.org?page8.html](http://www.hopelausea.org?page8.html) and the unnatural pale white skin pathology \_\_\_ esoterically the "curse of Japeth" from eating animal flesh.
