

EXHIBIT I_C-3: Predynastic Great "Sphinx" HU Rock Sculpture Masterpiece _____ Northern Sideview of Sphinx showing Trench, circa 10,500 B.C.

(From John A. West, "The Sphinx: Clue To A Lost Civilization?" in Conde Nast Traveler, February 1993, Page 101)

EXHIBIT NOTES:

- This north side view of the Sphinx Rock Sculpture shows the immense proportions of the largest sculpture in the world. **Note** the huge trench that was quarried with limestones of up to 200 tons removed and used for the **Sphinx Temple** seen in front of its paws and the **Valley Temple** to its right not shown. **Note the controversial 12 foot deep heavy rain water erosion patterns** seen clearly on the leonine body of the Sphinx. The heavy vandalism of the face of the **Sphinx** is also seen from this view, debatable as having been done deliberately by Arab and/or Napoleonic cannon fire to disfigure its obvious black African Anu People facial features.
